

The Anatomy of the State Chart of Accounts

Structuring Financial Intelligence
in the Norwegian Higher Education Sector

The Standardization Imperative

The Mandate

By January 1, 2027, all state entities must transition to SRS (State Accounting Standards).

The Objective

Enable true cross-sector comparability and track the exact cost of delivering specific public services, such as higher education.

The Mechanism

A single, mandatory Chart of Accounts ensuring that local university spending translates perfectly into macro-level State Budget reporting.

The 8-Pillar Framework

THE BALANCE ZONE

THE RESULT ZONE

Class 3: Income
3 Salgs- og driftsinntekt

Class 5: Payroll
5 Lønnskostnad

Class 8: Financials & Settlement
8 Finansposter / Avregninger

Class 4: Goods & Equipment
4 Varekostnad / større utstyr

Class 6 & 7: Operations
6 & 7 Annen driftskostnad

 The master blueprint dictating how every financial transaction in the state sector is classified.

The Decimal Classification Logic

THE MANDATORY BASELINE

All state entities must report exactly at the 3-digit level. This structural rigidity guarantees absolute comparability across the entire Norwegian public sector.

System Architecture: Rigidity vs. Flexibility

THE RIGID CORE (Macro)

Mandatory **3-Digit Level**. Ensures perfect aggregation across the entire state sector for parliamentary reporting.

630 – Rent

THE FLEXIBLE PERIPHERY (Micro)

One Structure, Two Principles

Classification of Assets Valuation Principles

Accrual Accounting Cash Basis

Dimension	Cash Principle (Kontant)	Accrual Principle (SRS)
Timing of Recognition	Upon literal payment (in/out).	Upon resource consumption or transfer.
Treatment of Investments	Fully expensed immediately in the year of purchase.	Capitalized as an asset and depreciated over its useful life.
System Footprint	Entities use the S-Rapport to map cash flow directly.	Requires P-Rapport for periodized data alongside standard cash mapping.

Balance Sheet Classes 1-2 Result Classes 3-8 6301 - 6303-6801

KEY INSIGHT: The Kontoplan structure remains identical for both users. The difference lies entirely in *when* and *how* transactions are routed through the Balance (Class 1-2) versus Result (Class 3-8) classes.

Accounting Croes – 6016-0-38

The Net-Budgeted University (Nettobudsjettet)

State Funding: Basic Allocations

[SRS 10] Funds enter and are recognized as income in parallel with the activity being performed.

Statens Konsernkontoordning (The Liquidity Pool)

Unlike standard state entities, universities retain their unspent liquidity at year-end via their Norges Bank settlement accounts.

External Funding: Contribution & Commission (BOA)

[SRS 9] Research funds enter, but income is only recognized strictly based on the percentage of project completion.

The Reporting Bridge: S-Rapport Integration

Classification of Assets

Valuation Principles

Accrual Accounting

Cash Basis

Local ERP System

The Standardized Funnel

The State Budget: Kapittel & Post

Cash Flow Statement (Kontant)

Operating Activities:

+ Incoming Payments from State (3-series)	250 000
+ Incoming Payments from BOA (3-series)	100 000
- Outgoing Payments (6-series)	-350 000

= Net Cash from Operations

0

Investment Activities:

- Outgoing Payments for Assets (1-series)	-50 000
---	---------

= Net Cash from Investments

-50 000

Financing Activities:

+ Change in Liquidity Pool	-50 000
----------------------------	---------

= Net Cash from Financing

-50 000

NET CHANGE IN LIQUIDITY

-100 000

Beginning Cash Balance

300 000

ENDING CASH BALANCE

200 000

Every **local artskonto** inherently maps to a **Kapittel** and **Post**, automating the translation of daily university operations into macro-level parliamentary budget tracking.

Balancing the Scales: Settlement with the Treasury

Internal Reporting Accounts

1980 / 198 / 199

Used by the university to book transactions that report back to the state.

The Treasury (Statskonto)

70-72 Series

The official state accounts used in the S-Rapport.

THE ZERO-OUT RULE: To balance the S-Rapport, internal 1980 accounts must perfectly mirror the assigned 70-72 Treasury accounts. This calculates the net standing between the University and the State at any given moment.

From Compliance to Insight: The Controller's Lens

The Controller's value isn't stating 'We have a variance.' It is stating 'Here is the cause, the forecasted impact, and the recommended action for university leadership.'

The Information Value Chain

The State Chart of Accounts is not just a ledger.
It is the architectural blueprint that translates daily
academic operations into actionable state intelligence.
